

Day 10 - Sample RAG Document

This PDF is designed for your Day 10 Retrieval-Augmented Generation (RAG) project.

1. What is Agentic AI?

Agentic AI refers to AI systems that can reason, use tools, remember context, and take actions to accomplish goals.

2. What is RAG?

RAG stands for Retrieval-Augmented Generation. It retrieves relevant information from external documents before generating an answer.

3. Vector Search

Vector search converts text into numerical embeddings and finds the most semantically similar chunks using similarity metrics.

4. Why Chunk Documents?

Large documents are divided into smaller chunks so that only the most relevant sections are retrieved, improving accuracy and reducing token usage.

5. Example Facts

- Python is widely used for AI and Machine Learning.
- Gemini is a multimodal large language model.
- FAISS is commonly used for efficient vector similarity search.
